QOSTODIAN RECON™

Customer Trust is Everything

Secure sensitive customer data—and your reputation—with Recon

Challenge

Is your organization entrusted with personal data? Is your protection bulletproof?

Gigabytes, and sometimes even Petabytes of data, are generated daily. And your data is constantly moving—from cloud-based documents to duplicated and downloaded files to emails. In a remote work environment with cloud and on-premises assets, it's a struggle to keep track of who has it and where it resides. An unacceptable amount of false positives from current tools and a shortage of talent are further compounding this problem.

Solution

Qostodian Recon™ puts data security teams in control of sensitive data.

When customer trust is on the line, assumptions just don't cut it. Get the facts in the form of a comprehensive sensitive data inventory. Recon offers the fastest way to find every piece of sensitive data in your organization's possession—on servers, cloud-based drives, emails, and more.

Recon installs in minutes and offers the lowest total cost of ownership. It's an easy sell to your IT team because it runs on a single virtual machine. In addition to lightning fast scans, you'll shorten response time and eliminate false positives with precise, granular results that make next steps clear.

Real-world benefits

CAA is considered Canada's most trusted brand. Driven by fierce loyalty, protecting sensitive customer data is non-negotiable.

However, the tool they were using to keep track of customers' sensitive data was time and labor-intensive to maintain. George Plytas of CAA wanted a faster way to protect sensitive data moving throughout servers, cloud drives and remote machines.

Immediate ROI

Install and use in minutes, no training required

Faster Response

Detailed results make next steps actionable

Intact Reputation

Bulletproof confidence

George's team runs keyword searches and views context to eliminate false positives.

"We found we were able to get the answers we needed 10–50x faster, with less overhead, infrastructure and maintenance activity required. **Receiving answers quicker gives me the ability to prioritize faster and get to the real security issues.**"

George Plytas,

Head of Information Security, CAA Club Group

Supporting your full data security workflow

Deploy
Point and scan

Discover
Find data fast

Detect
Know your risk

Decide
Take action

Typical use cases

PII / PCI / PHI audits
Data risk assessments
Data migrations

Fast facts

- Install in 5-minutes
- Run on a VM
- Configure classifications
- Schedule scans
- See inventory of PII, PCI, PHI data
- Visualize risk on dashboard
- Filter and sort data
- View detailed context

File types we scan
And 100+ more
