Files with sensitive info

120 files with sensitive information

90 files classified as high

23 files contain sensitive info and have not been accessed in the last 12 months

12 files encrypted or password protected

QOSTODIAN RECON™

Find your sensitive data, anywhere.

Challenge

Data wants to be free, but security teams have a job to do.

Security teams lack effective ways to keep up with exploding data volumes in a perimeter-less world full of blind spots. CISOs and auditors need faster tools to find sensitive data, and a reprieve from the unacceptable amount of false positives they receive. That's where Qostodian Recon™ comes in.

Solution

Get a hold of distributed data, without compromising security

Qostodian Recon™ restores visibility and accelerates an organization's ability to find and secure data, even in the most remote locations. CISOs and auditors leverage Recon to enforce data security policies and maintain control over data as their organizations grow. With Recon's lightning-fast analysis times, security teams get an immediate return on their investment, have access to contextualized results to improve their response time, and eliminate the need for complex infrastructure.

Real-world benefits

CAA, Canada's most trusted brand, takes the protection of its members' data seriously. However, their existing tool was time consuming and laborious to maintain. After thorough evaluation, CAA's data security team switched to Recon with a single click.

Instant Results	Speed	Trust
Easy to install and use - no training required	No servers to run, but scans 10 times faster	Contextualized results for targeted resources

" After running tests, we found that we were able to get the answers we needed 10 to 50x faster, with less overhead, infrastructure, and maintenance activity required."

George Plytas,

Head of Information Security, CAA Club Group

Qostodian Recon™ by the numbers

	CAA's previous tool	Recon
Installation	3 months	5 minutes
Maintenance	3 servers 5 administrators	1 virtual machine
Scan Time	1 GB/hour	10 GB/hour

Supporting your full data security workflow
Deploy
Identify and analyze your targets

Discover
Find sensitive data quickly, anywhere

Detect
Understand risk levels

Decide
Take steps to secure data

Fast facts

- Install in minutes

- Schedule your scans ahead

- Run on a laptop or virtual machine

- Set up unique classification criteria

- Quickly find sensitive PII, PCI and PHI

- View contextualized results (eliminate manual steps)

- View risk in a comprehensive dashboard

- Filter data by location, quantity and type of regulation
