

# Visibility and control over your sensitive data

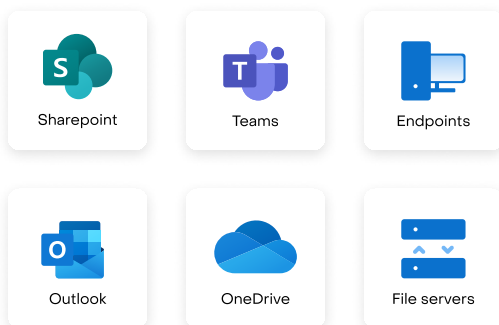

Track and secure high-risk files to reduce oversharing and accelerate GenAI adoption

## Secure your data security posture proactively

Data sources containing files pose a high risk for any organization. Any lack of awareness regarding their sensitive contents can result in significant issues, non-compliance or even disasters.

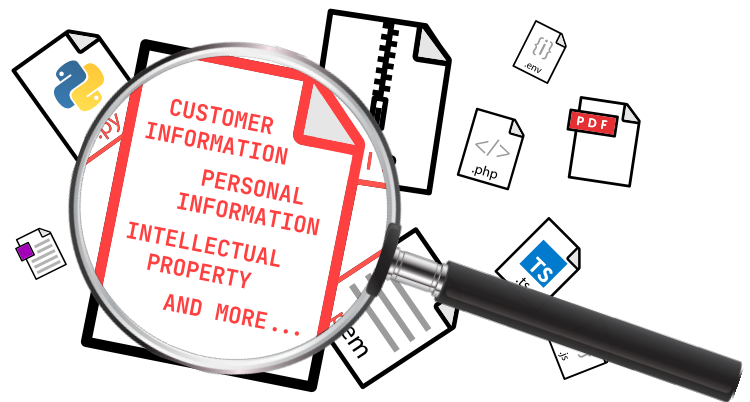

### High-risk data sources

Risk increases with daily employee access and potential exposure to generative AI like Copilot.

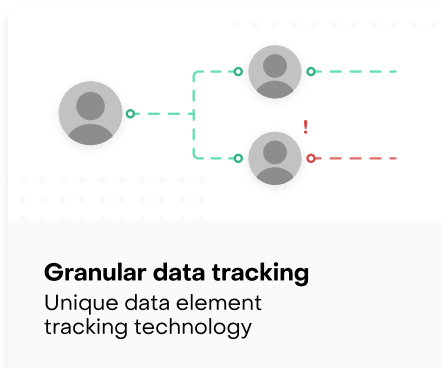

### Unstructured data files

If overlooked, these files can pose significant risks to your data protection and compliance efforts.

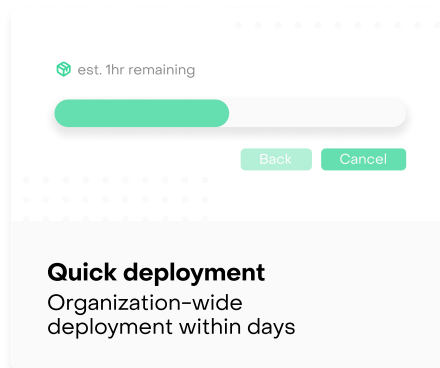

## Why Qohash?

Accurately track sensitive data like SSNs across various sources, users and files. Achieve organization-wide deployment and initial inventory in days. Straightforward, flat-rate pricing for complete cost predictability.

**Granular data tracking**  
Unique data element tracking technology

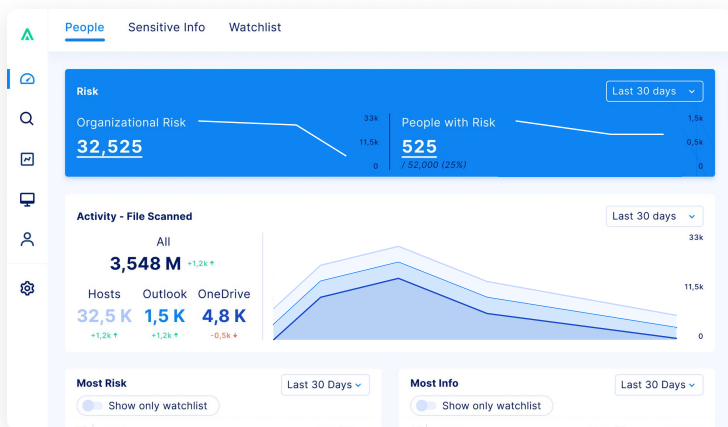

**Quick deployment**  
Organization-wide deployment within days

**Predictable flat-rate pricing**  
All-in cost based on employee count within the organization

# How does it work

Monitor your riskiest data sources 24/7. Qostodian scans files for sensitive content and reports findings centrally in a modern and easy to navigate web interface.

Scan any file size accurately and easily.

Sensitive data never leaves your environment.

Set alerts, integrate, and auto-quarantine files.

Analyze by info, person, file type, and source

## Straightforward rollout and operationalization

Full deployment can be achieved within days. Qostodian quickly provides an accurate inventory of sensitive data in files, enabling you to take effective action.

1

### Data inventory

Scan, catalog, and tag all data

2

### Access control

Track users, groups, and permissions

3

### Usage monitoring

Get a real-time view of risky actions

4

### Security posture

Evaluate security posture continuously

**Qostodian:** Enabling you to reach level 4 maturity with 24/7 visibility and control over sensitive data.

## Complementing Microsoft Purview

Qohash enhances Microsoft Purview by adding workstation coverage and in-depth insights into data propagation and access risks. Together, they form a cost-efficient and comprehensive data security solution.

**Qohash Qostodian**

Bottom-up data element tracking

**Microsoft Purview**

Top-down integrated data governance

Qohash offers data security solutions focusing on unstructured data risk management. Our platform, Qostodian, enables organizations to automatically monitor, identify, and address high-risk data efficiently. Our expertise lies in managing everyday data accessible by employees in regulated and high-stakes environments, including financial services, healthcare, public sector, and high technology.
