QOSTODIAN

Visibility and control over your sensitive data
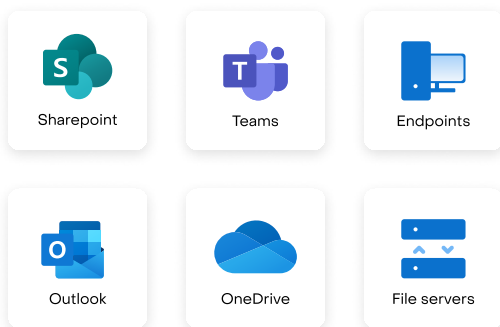

Track and secure high-risk files to reduce oversharing and accelerate GenAI adoption

Secure your data security posture proactively

Data sources containing files pose a high risk for any organization. Any lack of awareness regarding their sensitive contents can result in significant issues, non-compliance or even disasters.
High-risk data sources
Risk increases with daily employee access and potential exposure to generative AI like Copilot.

Granular data tracking
Unique data element tracking technology

Quick deployment
Organization-wide deployment within days

Predictable flat-rate pricing
All-in cost based on employee count within the organization

How does it work

Monitor your riskiest data sources 24/7. Qostodian scans files for sensitive content and reports findings centrally in a modern and easy to navigate web interface.

Scan any file size accurately and easily.

Sensitive data never leaves your environment.

Set alerts, integrate, and auto-quarantine files.

Analyze by info, person, file type, and source

Straightforward rollout and operationalization

Full deployment can be achieved within days. Qostodian quickly provides an accurate inventory of sensitive data in files, enabling you to take effective action.

1
Data inventory
Scan, catalog, and tag all data

2
Access control
Track users, groups, and permissions

3
Usage monitoring
Get a real-time view of risky actions

4
Security posture
Evaluate security posture continuously

Qostodian: Enabling you to reach level 4 maturity with 24/7 visibility and control over sensitive data.

Complementing Microsoft Purview

Also using Micorsoft Purview? Augment your investment with Qohash by adding workstation coverage and in-depth insights into data propagation and access risks. Together, they form a cost-efficient and comprehensive data security solution.
